

Wooden Projects: Bee House - With Glue

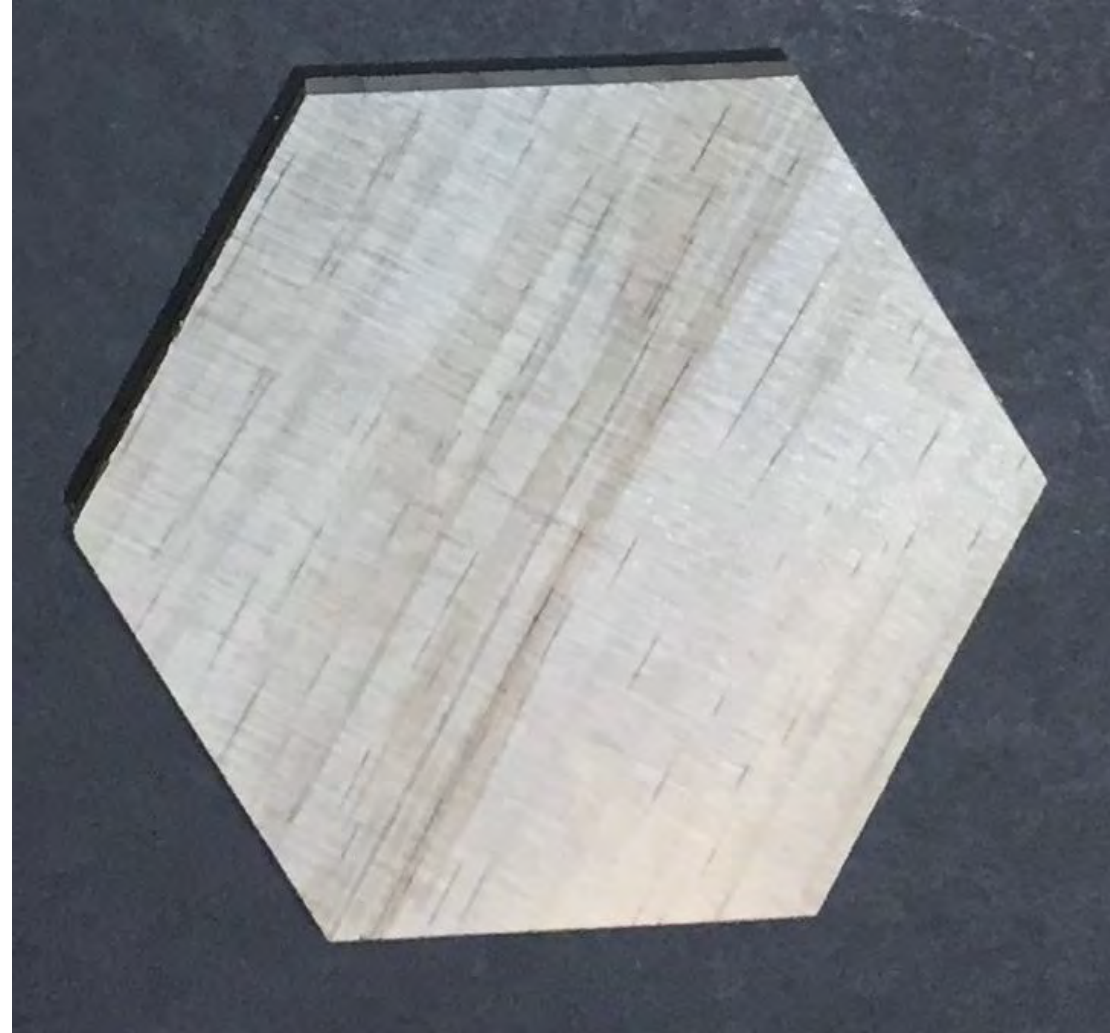

Materials

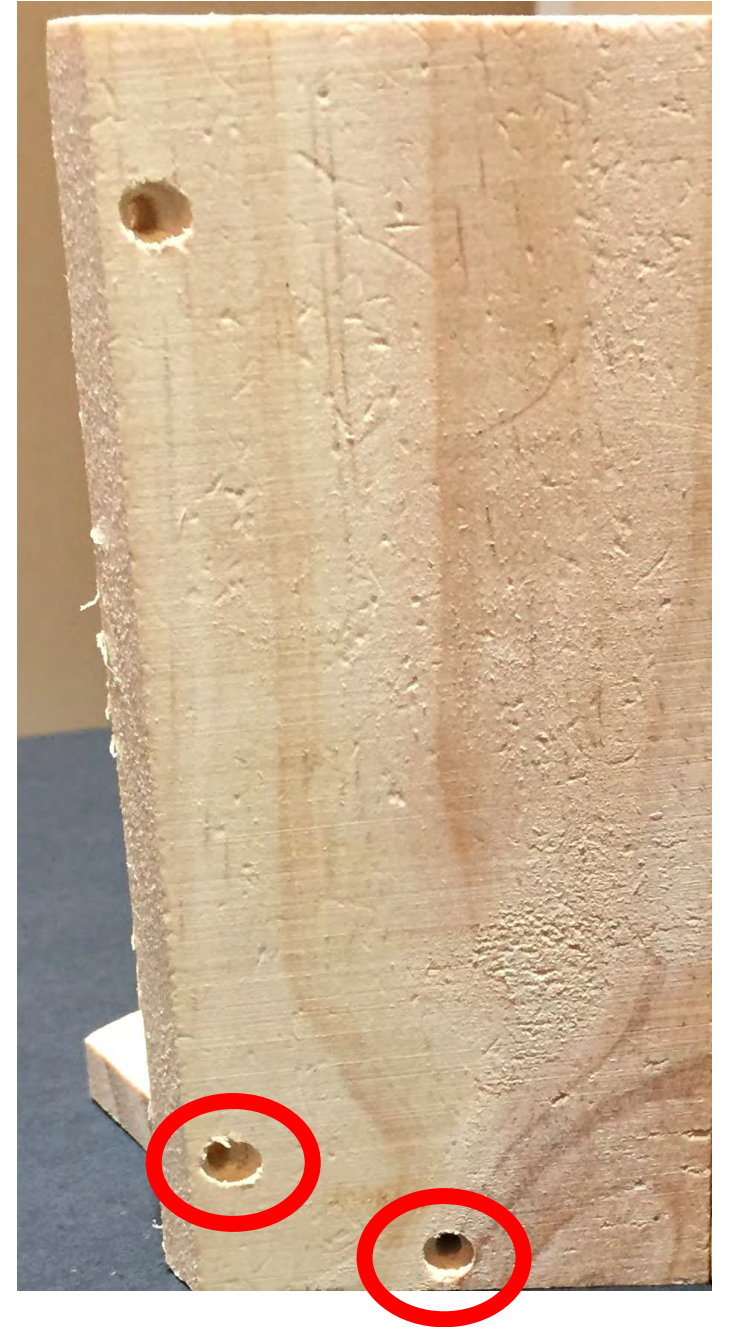

Write your name, using a sharpie, on one side of the hexagonal base piece

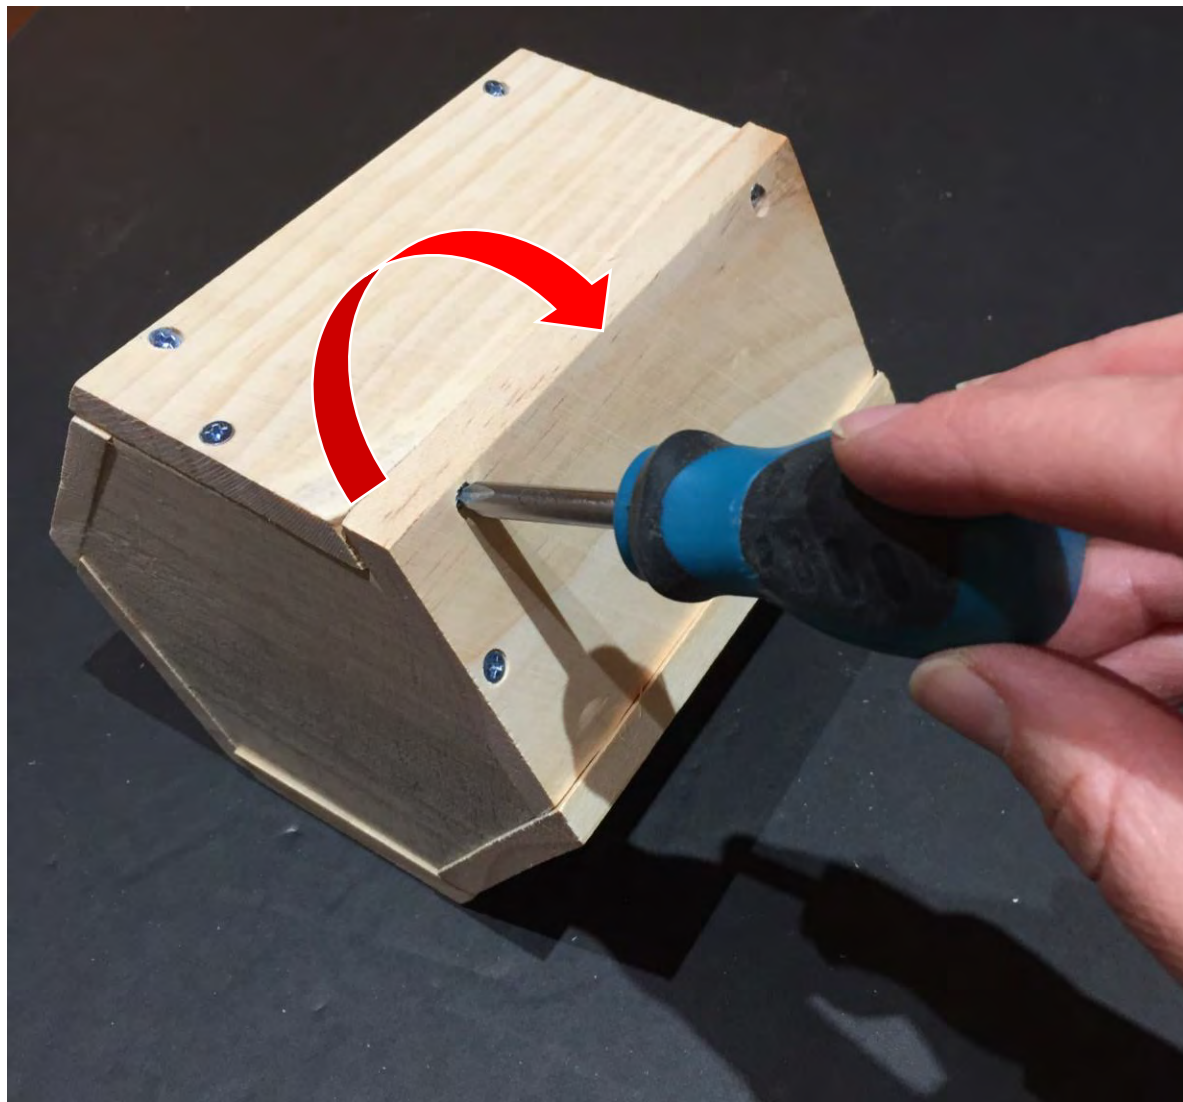

Flip the hexagon over so that your name is facing down (we cannot see it)

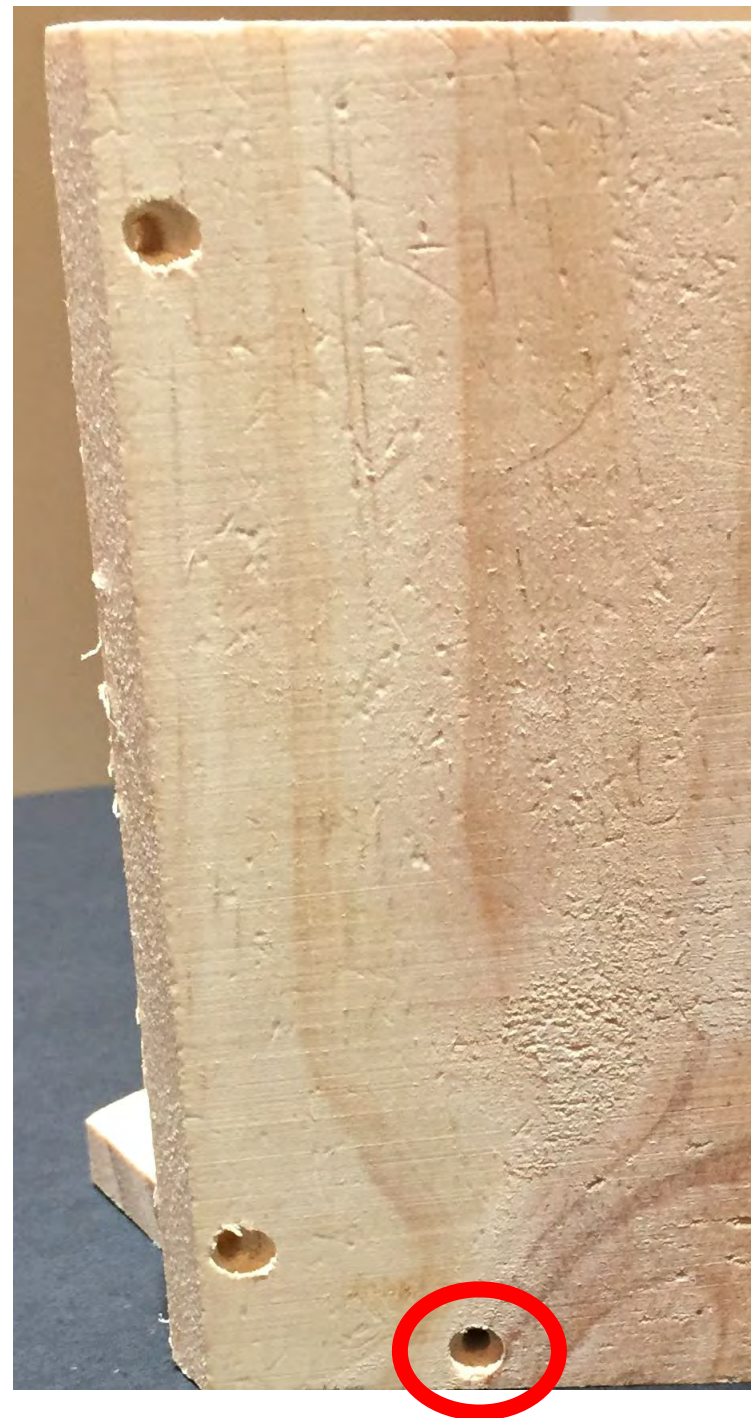

Stand one of the side panels up around the hexagonal base. Make sure the edge with 2 holes is at the bottom.

Lefty Loosey Righty Tighty

Screw one
screw into
the bottom
middle hole.

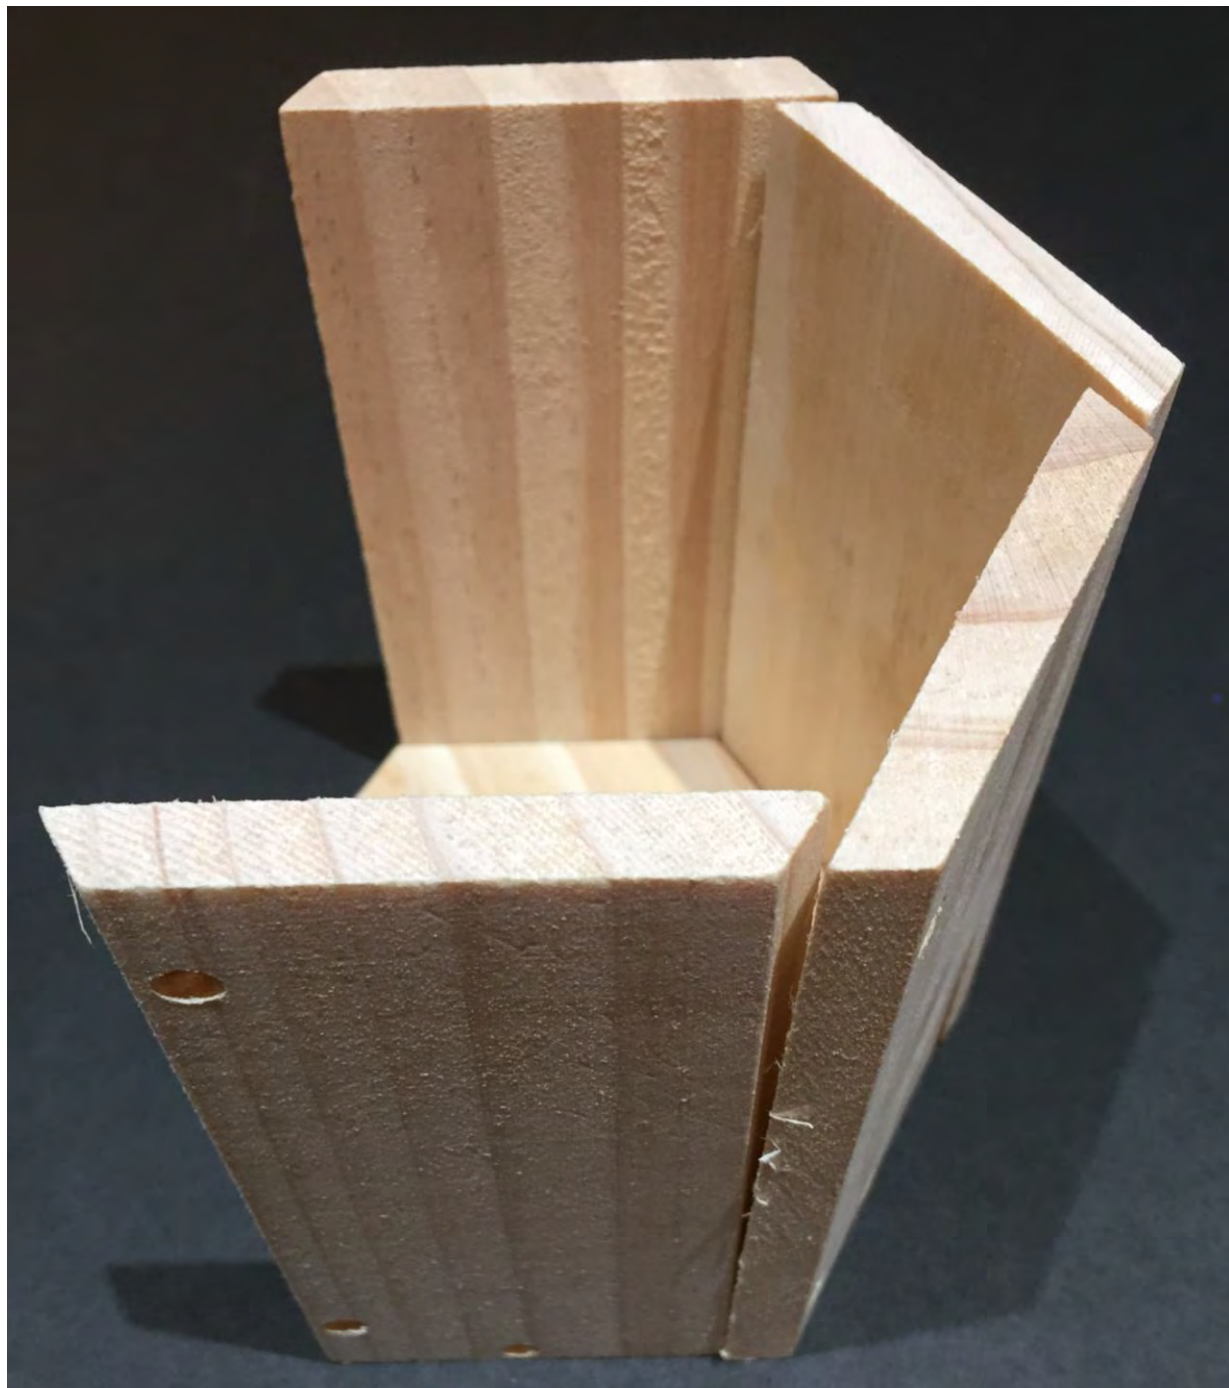

Add a thin line of glue to the edges circled in the images.

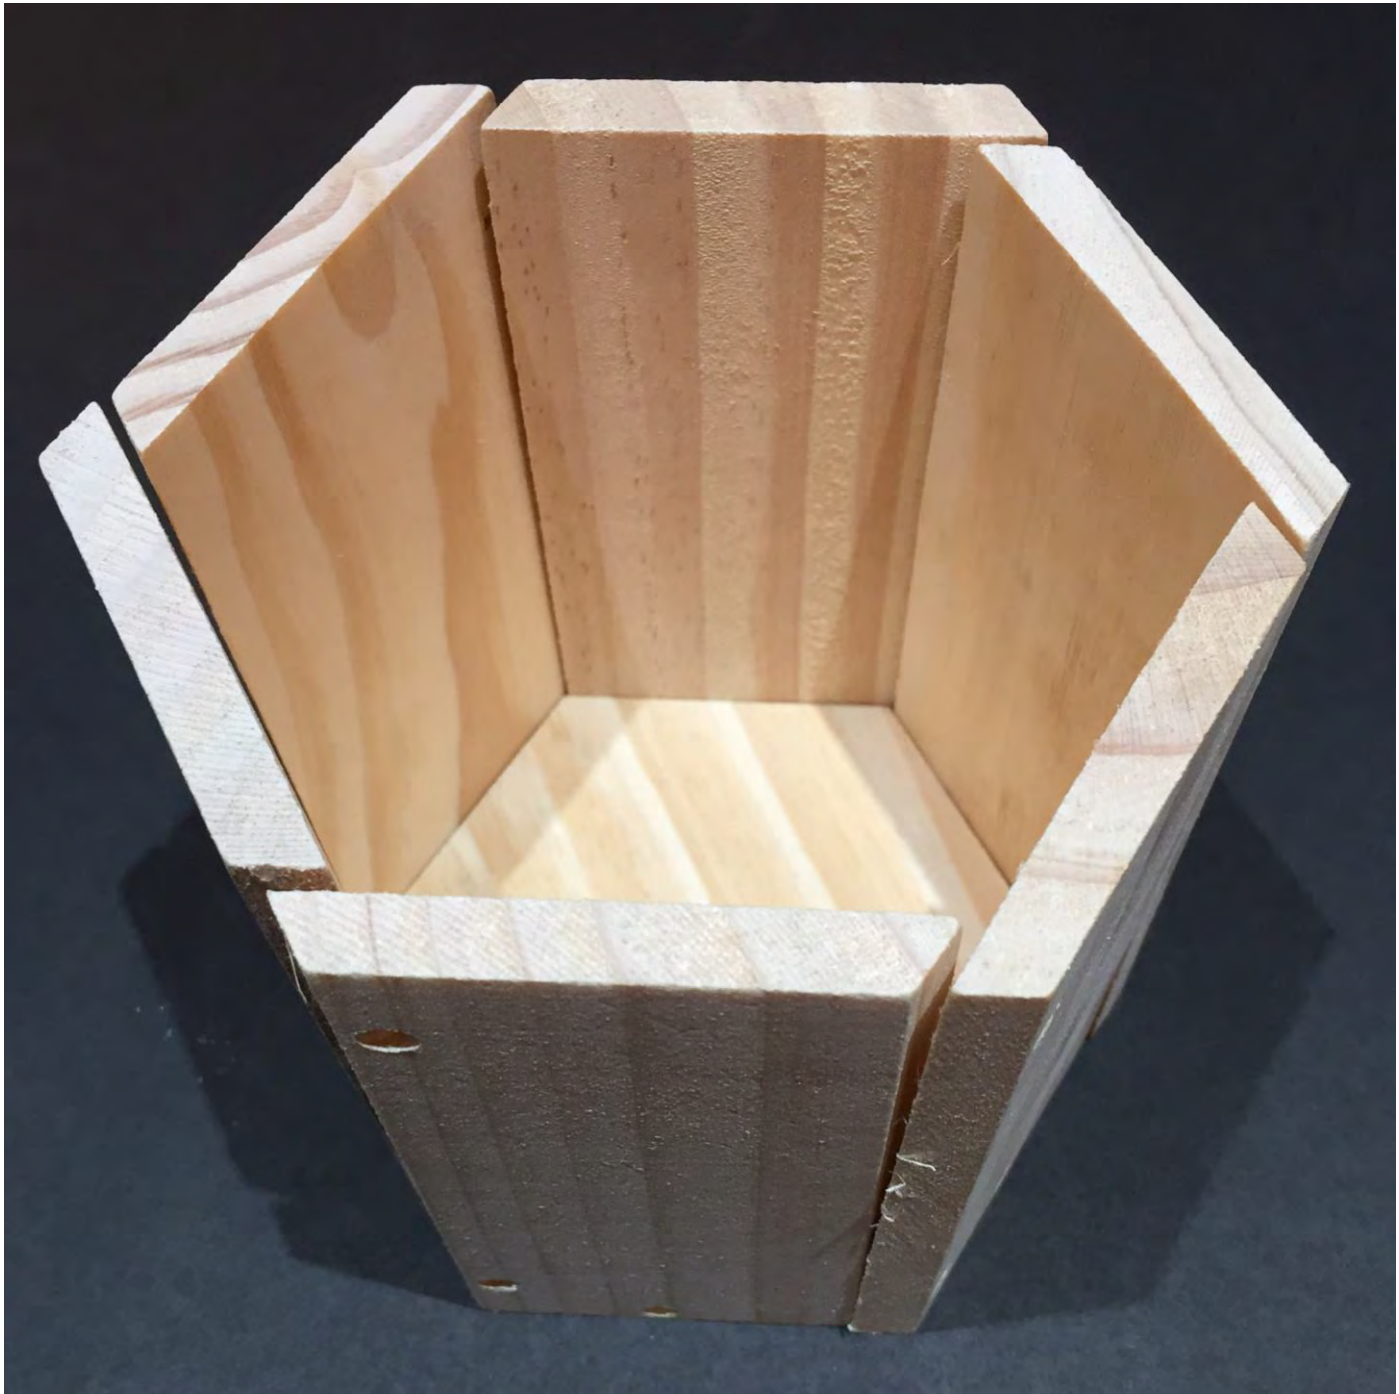

Continue adding panels, one at a time, applying glue to both edges as you go.

BREAK

Presenter will add an 'x' to both roof panels on the sides that will face down

Find the roof panel with 2 holes and line it up with the back of the bee house and the edge of a side panel before gluing.

BREAK

Repeat with second roof panel

BREAK

Hand out hangers

- Insert bamboo tubes, one at a time, starting with the largest tubes. Use the smaller tubes to fill in the spaces around the large tubes.
- Once all tubes are snug, carefully turn the house over so that the tubes are facing the floor. If any tubes fall out, put them in a different spot.
- Your goal is to fit the tubes in so that they do not fall out when turned over.
- *You might not be able to fit all tubes in the bee house
